Product Overview:

Powered by Alien®'s break-through **Higgs™4 UHF RFID IC** and **innovative "Bat" antenna design**, the ALN-9770 delivers industry leading EPC Gen 2 performance and reliability in a specialty tag uniquely focused on effectively tagging automotive batteries.

With its Higgs-4 core, the "Bat" delivers next generation read and write performance, yet is completely **optimized** for the highest volume enterprise, retail, and automotive applications.

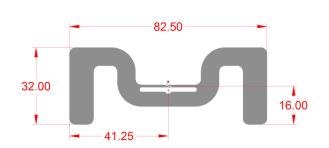

An optimized memory footprint includes a 32-bit TID, a 64-bit Unique TID for authentication and next generation serialization applications, a 128-bit EPC memory bank, 128-bits of user memory for distributed data applications, and password protected read and write support capabilities to prevent unauthorized viewing and modification of the tag's data.

ALN-9770 inlays are World Tag compliant, enabling consistent operation across the diverse frequencies of the Americas, Europe, Middle East, Asia, and Africa.

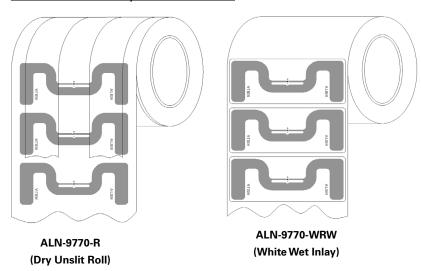

[&]quot;Just wanted to compliment Alien on this tag. The "BAT" is an awesome tag! We are getting excellent results thus far testing it in a number application but most impressive thus far is using it on "Tires" - "said Conrad Taljaard, Managing Director, from RFIQ (RFID IN OUR WORLD), Centurion, South Africa.
